

General Industries Water Tanks

General Industries provides a full line of water tanks for storing potable and non-potable water, waste water and lechate runoff. Our tanks are used for fire suppression systems, community water systems and rainwater harvesting systems. We also offer ASME hydropneumatic tanks for potable water for both aboveground and underground installations.

- Fabricated Per AWWA and NFPA Standards
- Potable water tanks for drinking water systems, industrial applications and fire suppression systems
- Non potable applications include leachate tanks, waste water collection and rain water harvesting
- Water tanks are available in horizontal, vertical and rectangular configurations
- Monitoring equipment, pumps and labeling are available

Additional features:

- Carbon Steel with NSF 61 approved interior coatings
- 304L and 316L Stainless Steel Options for both atmospheric tanks and ASME Pressure Vessels
- Above Ground and Underground options for both atmospheric and ASME Pressure Vessels
- Capacities range up to 75,000 gallons

Potable, Non Potable and Waste Water Applications
